

ECHOTEL® 961/962

Ultrasonic level switches

DESCRIPTION

The Echotel® 961/962 series utilizes pulse signal technology to detect high or low level alarm(s) in a broad range of viscous to light liquids. Pulsed signal technology provides superior performance in applications suffering from foam, aeration, heavy turbulence and suspended solids.

The Echotel[®] **961** has a tip sensitive setpoint and is ideally used as high or low level alarm.

The Echotel[®] **962** offers 2 setpoints on the same transducer, a tip sensitive setpoint and a second setpoint via a flowthrough upper gap. The unit is used for level alarm or to control a pump in an auto fill/empty mode.

The Echotel® 961/962 is equipped with advanced diagnostics that continuously check the transducer and electronics. The diagnostics also alarm for electrical noise interference from external sources.

FEATURES

- No calibration
- 2 wire loop powered with mA output or AC/DC line powered with integrated relay(s)
- · Continuous selftest with selectable error output
- LED identification for:
- process alarm
- error of transducer, electronics or electrical noise interference
- wet/dry status of transducer
- · Push buttons for manual testing of alarm and error signals
- · Adjustable time delay up to 10 s
- · Metal and plastic transducers
- Suited for SIL 1 and SIL 2 loops (full FMEDA report available)

APPLICATIONS

- VESSELS: Any mounting position.
- PROCESS CONDITIONS: Unaffected by - shifting dielectric, density, or pH of the liquid
 - presence of foam, turbulence, visible vapours
 - fast drain/fill rates
 - transducer coating and air bubbles
 - vacuum conditions.

Loop or line powered

PRINCIPLE OF OPERATION

The Echotel® 961/962 operates on a two crystal pulsed or "transmit-receive" principle which applies a high frequency electronic burst to the transmit crystal. The signal is then converted into ultrasonic energy and transmitted across the sensing gap towards the receiver crystal. When there is air in the gap, the high frequency ultrasonic energy will be attenuated, thereby not allowing the energy to be received. When there is liquid in the gap, the ultrasonic energy will propagate across the gap and the current shift or relay output will indicate a reception of the signal.

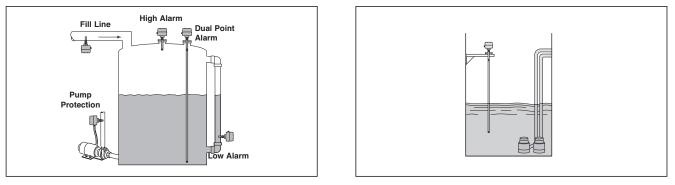

MOUNTING

APPLICATIONS

High/Low Level Alarm

Pump Control

ELECTRONICS SPECIFICATIONS

Description		Specification	
Input Voltage	mA - version	2 wire loop powered, 12 - 35 V DC	
Input Voltage	Relay - version	100 - 265 V AC 50/60 Hz or 12 - 35 V DC	
Power Consum	otion	< 3 Watt (relay version) - < 1 Watt (mA version)	
Output	mA - version	961 : 8 mA (safe), 16 mA (alarm) \pm 1 mA 962 : 8 mA (safe), 12 mA (lower gap alarm), 16 mA (upper gap alarm) \pm 1 mA 961/962 : \leq 3,6 or \geq 22 mA error signal	
Output	Relay - version	961: one 5 A DPDT relay 962: two 5 A SPDT relays 961/962: one 5 A SPDT malfunction relay	
Time delay		0,5 to 10 s adjustable (in addition to transducer response time)	
Indication		LED's for process alarm status, malfunction (error of transducer, electronics or elec- trical noise interference) and wet/dry status of transducer (961 with relay only)	
Selftest	Automatic	Continuously verifies electronics, transducer and noise interference	
Semesi	Manual	Via pushbutton for checking alarm output(s) and error output/function	
Housing material		IP66, cast aluminium or cast stainless steel	
Approvals		ATEX II 1 G Ex ia IIC T4 Ga, intrinsically safe (current shift units) ATEX II 1/2 G Ex db IIC T6 Ga/Gb, flameproof enclosure IEC Ex db IIC T6 Ga/Gb + IEC Ex ia IIC T4 Ga Overfill prevention TÜV - WHG § 63 / VLAREM II 5.17.7 Other approvals are available, consult factory for more details	
SIL (Safety Integrity Level)		Functional safety to SIL 2 in accordance to IEC 61508 – SFF > 90 %	
Electrical data		Full FMEDA report and declaration sheets available at requestUi = 28,4 V, li = 94 mA, Pi = 0,67 W (mA version)	
Equivalent data		Ci = 10,4 nF (961) / Ci = 60 nF (962), Li = 400 μH (mA version)	
Shock/Vibration		ANSI/ISA-S71.03 Class SA1 (shock), ANSI/ISA-S71.03 Class VC2 (vibration)	
Net weight		Alu: 1 kg (2.2 lbs) – electronics only SST: 2,5 kg (5.5 lbs) – electronics only	

PERFORMANCE

Description	Specification
Response time	0,5 s typical
Repeatability	± 2 mm (0.078")
Ambient Temperature	-40 °C to +70 °C (-40 °F to +160 °F)
Humidity	0-99 %, non-condensing
Electromagnetic Compatibility	Meets CE requirements (EN 61326: 1997 + A1 + A2) and NAMUR NE 21

TRANSDUCER SPECIFICATIONS

Description	Plastic transducers	Metal transducers	
Material	CPVC Kynar® (PVDF)	316/316L SST (1.4401/1.4404) Hastelloy® C (2.4819) Monel® (2.4360)	
Mounting	Threaded (NPT/BSP) - Flanged (ASME - E	N)	
Actuation length	From 5 cm up to 304 cm (2" up to 120") – PVDF From 5 cm up to 330 cm (2" up to 130") – CPVC	From 3 cm up to 330 cm (1.2" up to 130")	
Process temp. (consult temp/ press. graphs)	-40 °C to +120 °C (-40 °F to +250 °F) – PVDF -40 °C to +80 °C (-40 °F to +180 °F) – CPVC	-40 °C to +165 °C (-40 °F to +325 °F) – standard -80 °C to +120 °C (-110 °F to +250 °F) – low temperature version in 316/316L SST	
Max pressure (consult temp/ press. graphs)	13,8 bar @ +40 °C (200 psi @ +100 °F) for NPT threaded units	82,8 bar (1200 psi) for Monel transducers Consult temp/press. graphs for other materials	
	Flanged models are downrated to the design pressure of the selected flange		

ELECTRONICS

Loop powered 961

Line powered 961

FUNCTIONS

Adjustable time delay:

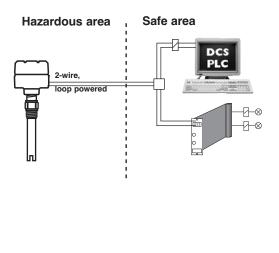

The Echotel[®] 961/962 provides a fast response time of typically < 1s. In applications with turbulent or boiling surfaces, this may lead to scattering of the output. For these applications, the user can adjust via a potentiometer a time delay from 0,5 to 10 s and avoid scatter of the output.

Pushbuttons for manual check: The alarm output and the error signal of the Echotel® 961/962 can be manually checked via pushbuttons. For loop powered units, the loop test pushbutton will sequentially check the shift of loop current. For relay operated units, the level test pushbutton will make the relay change from energized to de-energized status or vice versa. Pressing the fault/malfunction pushbutton stops all transmit pulses, which simulates an electronics failure, and tests the selected output signal.

LED identification:

Alarm LEDS report alarm status. For 962 models, the alarm status per gap is reported. A separate LED on the 961 model (with relay output), reports independently from the alarm status, whether the gap is immersed or not.

ELECTRICAL WIRING

Fault LED reports a malfunction of the unit. The blinking sequence of the LED identifies the failure (electronics, transducer or electrical noise interference).

Malfunction LED (only for units with relay) confirms that the malfunction relay is energized in normal operation

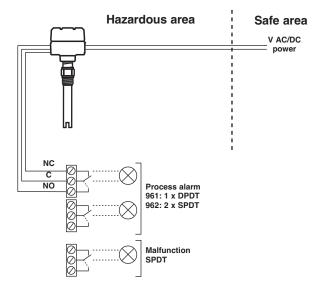

Pump Control (only 962 model with relays):

The model 962 with relays can be set for pump control or level alarm. By selecting pump control (PC), the unit will latch its 2 SPDT relays and provide automatic fill or drain function between its 2 setpoints. In level alarm mode (LC), the unit will detect either high and high-high or low and low-low level alarm.

Selectable error signal:

The error signal of loop powered units (961/962) can be set for either 3,6 or 22 mA. The separate malfunction relay of the 961 can be set for independent or joint operation with the alarm relay. The 962 with relays will always report a malfunction via the alarm relay.

Line powered

QUICK RESPONSE CELL (QRC)

Several models are available for extra quick shipment, within max. 15 days after factory receipt of purchase order, through the Quick Response Cell (QRC).

Models covered by QRC service are conveniently green coded in the selection data charts.

To take advantage of QRC, simply match the green model number codes (standard dimensions apply).

QRC delivery is limited to a maximum of 10 units per order. Contact your local representative for lead times on larger volume orders, as well as other products and options.
